

## Screen Share on a Mac - Zoom

If you are unable to share your screen on a Mac it is usually due to your privacy settings. The below details how to amend these settings. We recommend signing out of Zoom prior to making the below changes.

Open your Mac Settings

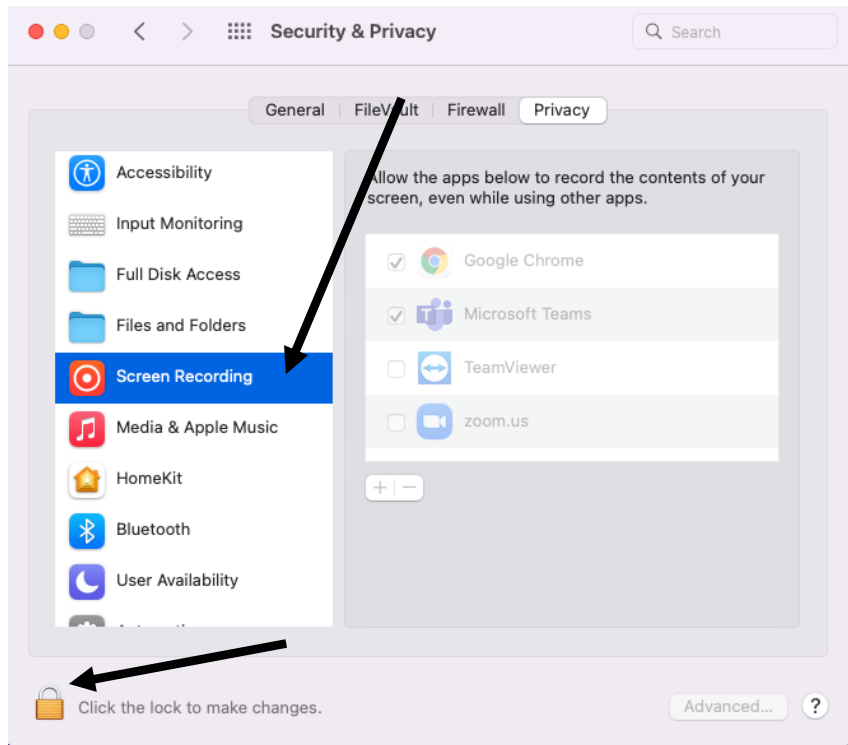

Go to 'Security and Privacy'

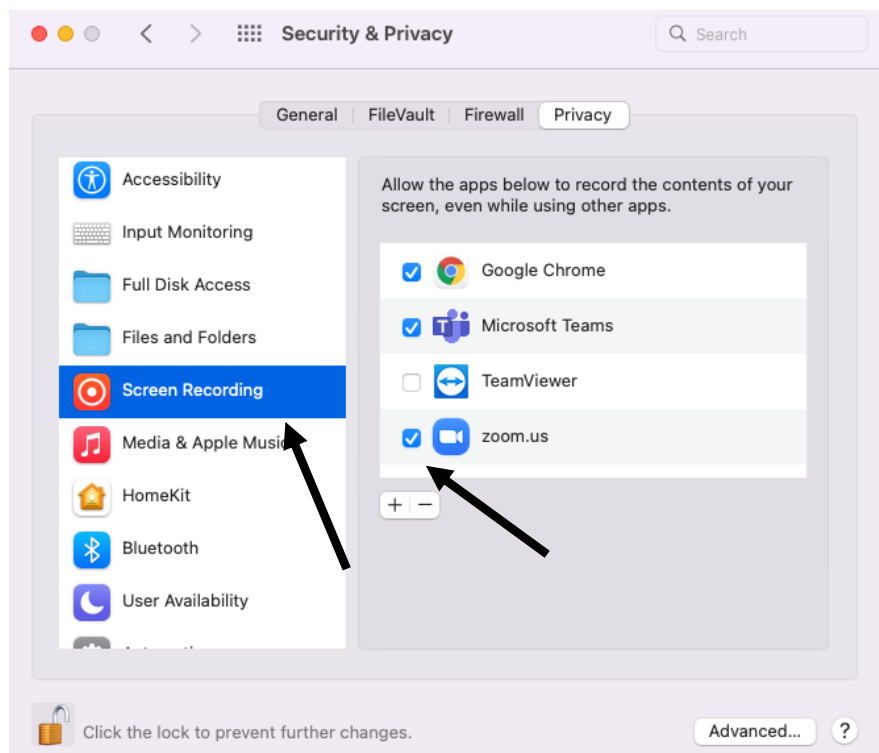

Click 'Screen Recording' (note, the symbol for screen recording may be different on your Mac)

Please note, if the area on the right, which includes the Zoom logo, is greyed out you will need to click on the padlock on the bottom left and enter your password to make changes.

Tick the box next to Zoom to allow screen sharing on Zoom – if you wish to allow screen sharing on other apps, such as Microsoft Teams, simply tick the relevant box.

Please note, if you are currently logged into Zoom you will need to log out & log back into Zoom before the changes come into effect.

If the above does not work, please contact Bywater for further assistance.
